

### Cyber & Security Services

- Predict
- Prevent
- Detect
- Respond
- Regulation & Compliance

### Solutions

- **Disk Encryption** - centralised management of protected devices
- **File Encryption** - centralised protection of data anywhere
- **Enterprise** - the best of both

### Features & Benefits

- Always-on encryption protects data everywhere
- Transparent encryption ensures user productivity
- Proactively protects data against data theft
- Real-time threat protection
- Secure external sharing with password-protected files
- Mindful, one-click decryption
- Lost devices, protected data
- Synchronised, for secure content collaboration on mobile devices
- Secure key recovery on Mobile Devices
- SafeGuard Management Centre

Organisations with operations in the UK currently need to comply with the Data Protection Act 1998, which regulates how personal information is used by organisations, businesses and the Government. The Information Commissioner’s Office (ICO) is responsible for the enforcement of the Act.

**A new regulation, known as the EU General Data Protection Regulation (GDPR), will become fully enforced on 25th May 2018 and will apply to both the UK and the EU, regardless of Brexit.**

Encryption is the only technology to be explicitly referenced in the GDPR and is strongly recommended to protect data. It could potentially mean the difference between a reportable data breach or not.

### Proactive Data Protection with Synchronised Encryption

SafeGuard, EACS’ data protection solution, encrypts content as soon as it is created. The encryption is always on, allowing for seamless and secure collaboration. Synchronised Encryption proactively protects your data by continuously validating the user, application, and security integrity of a device before allowing access to encrypted data. This method of always-on protection goes everywhere your data goes, making it the most comprehensive data security solution on the market.

### Highlights

- Application-aware encryption that’s always on
- Synchronised Encryption proactively protects data against threats
- Comprehensive encryption across platforms and devices
- Transparent encryption process for secure collaboration
- Proof-of-compliance reporting
- Centralised key management
- Manages device encryption including BitLocker and FileVault 2
- Windows, Mac, iOS, Android, and cloud-based file sharing
- Synchronises encryption keys with Mobile Control

### Licensing

| Modules                                    | SafeGuard Disk Encryption | SafeGuard File Encryption | SafeGuard Enterprise |
