- Fast resilient internet connectivity

The Need to Plan

There's no avoiding it - a firm needs a plan for when things go wrong. A disaster can take many forms: it can be a malware attack that renders your email server unusable, or it can be a flood in your offices that prevents your users from working. However a disaster occurs, it is no longer acceptable for your firm to simply hope for the best; you need to have plans in place which will enable you to implement disaster recovery best practices thereby ensuring that the impact to you business is minimised.

EACS realises that for many businesses, your operating environment is one of the most crucial functions with in your business. EACS understands that, in the event of a Disaster Recovery invocation, it is paramount to re-establish operations as soon as possible. EACS, together with its partner The Fortress, are able to provide various Work Area Recovery options and locations thereby ensuring that your staff has the ability to continue to operate in the event of a disaster as quickly as possible.

Why is Home Working not the answer?

For many businesses working from home is a simple and effective solution. However there are many risks and challenges associated with this solution. Notwithstanding all of the security issues surrounding around protecting your customer data, staff may also not always have access to the right resources or environment to work effectively and efficiently. Many will not have the space to work for extended periods, certainly not if Health and Safety legislation is to be complied with. All of this combined means that simply relying on working from home as your business continuity solution may be a mistake. Whilst it is an option it is one that needs careful thought and consideration and coordination.

Business Value

- There are numerous reasons why businesses may require an alternative location from which to base the day to day operations should a disaster occur: Keep the business pace in times of DR - replicate your office entirely with a work area recovery solution and your services provider can restore operating systems & applications to within strict SLAs. One mistake businesses make when drafting a BCP is assuming an event will only affect their organisation for 24 - 48 hours. An alternative work area recovery arrangement is the safest way to protect a business against longer term business continuity issues.
- Regulation – 42% of companies across all industries have been asked for proof of a solid DR and BCP plan from regulatory bodies within the last 12 months (Forrester Research).
- Cost effective approach to DR - protecting the longevity of your business is not a material cost. EACS offers both contended and dedicated alternative workplace recovery options at multiple DR sites to suit any budget and requirement.

DISASTER RECOVERY

Workspace Recovery

In Partnership with

Fortress

- Reputation protection - down time is damaging to an organisation's reputation; within London's tight-knit financial community, word spreads fast when a firm is unable to continue to operate. According to the Institute for Business and Home Safety, 1/4 of companies that close due to disasters never reopen.
- Advantages of working in a team - in times of DR, many businesses opt for a remote access solution. However, if a business relocates to an alternative workplace site, team work can continue more easily which will help keep the focus.
- Flexibility and scalability - with EACS, clients can change their DR seating requirements as the needs of the business alter.

Work Area Recovery Locations

Together with its partner The Fortress, EACS is able to provide you with both dedicated and contended seating options at 2 separate locations.

- The Pyramid Building located close to Bank at the south end of Tower Bridge
- The Fortress situated in the modern picturesque setting of Greenwich View close to Canary Wharf

Overview of Service

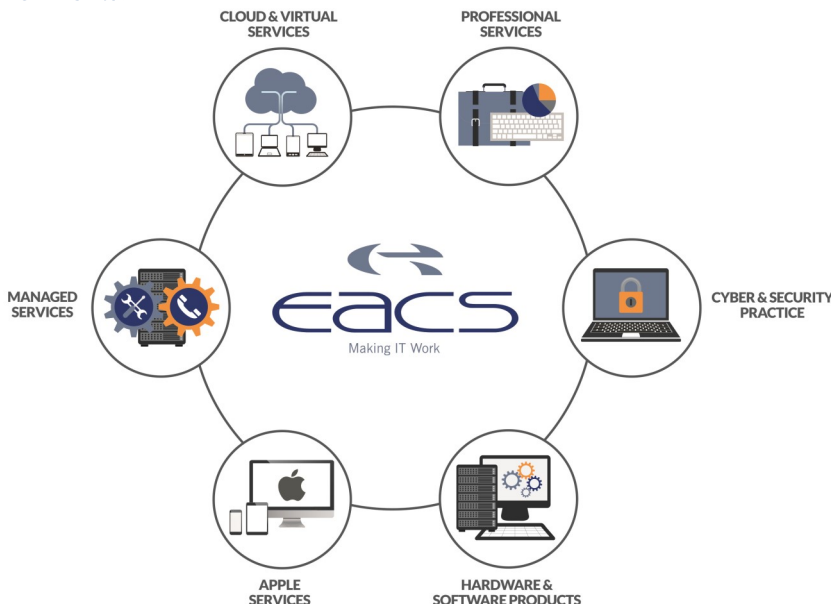

Dedicated Seating - certain types of businesses have the legal requirement to guarantee that their staff are able to continue to operate at an alternative location seamlessly and quickly in the event of an incident. These are often fast paced businesses that have to remain agile and risk free. EACS is able to provide businesses such as this with access to a dedicated, tailored Workplace Recovery Areas that is specific their needs and located in a location that does not inhibit your ability to continue to function, and that you are able to transfer your day to day operations to with minimal impact or delay.

Contended Seating - contended seating provides businesses with a effective alternative to dedicated seating. EACS is able to provide a contended seating arrangement which provides business with the peace of mind that their staff are able to.

Summary

Together with our partner The Fortress, EACS is able to provide you with a cost effective Workspace Recovery Solution that will enable you to fulfil any regulatory requirements and provide you with the ability to continue to operate in the event of an emergency.

EACS provide IT products, solutions and services to help your business grow, reduce cost and improve efficiency. With a focus on core IT, including cloud services and cyber security, we support both Microsoft and apple environments.
