

SECURITY LIFECYCLE REVIEW

CYBER & SECURITY
PRACTICE

Security Assessment Service

At a Glance

- Highlight known and unknown threats
- Uncover data breaches
- See what's really happening in your network traffic

What you get

- Network traffic visibility
- Highlights potential risks
- Shows URL traffic, content types & catalogues threats
- Recommendations for dealing with identified risks

Key Features

Request your customised Security Lifecycle Review to see:

- Applications in use, and the potential risks to exposure
- Specific details on ways adversaries are attempting to breach your network
- Comparison data for your organisation, versus your industry peers
- Key areas to focus on for reducing your organisation's risk exposure

Simply put, EACS assesses your risk, and provides you with a report which you can action, either through your own teams, a third party or us.

EACS Security Assessment Review (SLR) will help you deliver cyber security excellence and understand your cyber security risk.

- Are you doing everything you can to avoid threats and breaches?
- Have you got rules in place about who can use what, and when?
- Can you see threats coming in, even from SaaS applications?
- Do you know how many threats known and unknown are attacking your network?
- Do you know what's really happening with your network traffic?

If you cannot answer yes to all of these points you need to do a Security Assessment Review.

Deep dive into your network

The SLR will give you visibility of what is really happening on your network. For example, it will clearly show where you may have potential risks on your network that could affect your security.

It will give you a full understanding of which applications are being used, including any 'shadow' applications, that may not have been authorised by the IT department. It will show URL traffic, content types, and will catalogue all potential threats on the network – known and unknown and those linked to user behaviour. Best of all, it will give you clear recommendations for dealing with the risks that are identified.

Knowledge is power, the power to stop an incident happening.

How it works

We offer this assessment as a way to provide a detailed view of what applications and risks are running in your environment. Among other benefits, the SLR can be conducted in a monitor-only configuration where the next-generation firewall, instead of being deployed inline, is installed passively in "tap mode" to monitor network traffic. While passive, the appliance provides detailed layer-7 visibility to applications, protocols, content, threats, and users.

Security Assessment Service

CYBER & SECURITY PRACTICE

Additional services

EACS supports its organisations with a proven methodology to support cyber security excellence. The SLR tool has been a big eye-opener to many security professionals as “interesting” and unexpected findings always come up. Some findings are immediately actionable and other findings give insight to risks that may need further planning and investment to be properly addressed in the long term.

EACS has a range of solutions and services that follow the proven industry model of Predict, Prevent, Detect and Respond. Discover vulnerabilities in your systems and remediate them, before they are exploited by someone else (predict). Significantly reduce the risk of damage from cyber attacks (prevent). Monitor applications, systems, and networks for intrusions and suspicious behaviour (detect). Recover systems and data; perform forensic analysis and bounce back stronger (respond).

Summary

Complete application visibility and actionable security intelligence. Assess your organisation’s current cybersecurity posture and minimise exposure to business and security risks. The Security Lifecycle Review risk assessment will show you which SaaS and other applications, URL traffic, content types, and known and unknown threats are currently traversing your network, specifically highlighting where potential risks exist.

EACS is the expert in the delivery of IT services to the mid market. It is an award winning and trusted provider of IT solutions and managed services to a wide range of UK organisations of all sizes. Founded in 1994, EACS supplies practical, innovative and cost-effective IT products, solutions and services to businesses. Solutions include infrastructure, end user computing and systems management. Our services range from ad-hoc consultancy, support and training through to fully managed or hosted IT systems. Partnerships with market leading manufacturers means EACS is positioned to provide organisations with the highest level of expertise and quality.
