

# WINDOWS 10

## Application Assessment Service

Modern Workplace

### Features

- Assesses your application compatibility with Windows 10 and Edge browser
- Provides guidance on how to remediate application compatibility
- Enables accurate project scoping, infrastructure resource estimation, staffing requirements and timeline and budget projections
- Indicates the readiness of your applications for Windows 10, 64-bit, App-V, VDI and a whole range of other options

### Advantages

- Significantly reduces migration testing time
- Speed

### Benefits

- Eliminates guesswork by providing application compatibility reports for desktop and application delivery projects.
- Enables you to design solutions that deliver against your organisation's unique needs

Part of our overall Discovery as a Service offering **eacs** has developed a series of low-cost Business and Technical assessment services designed to provide you with critical performance data about your current desktop, user and application estate. This data can be used to inform decisions on your future desktop strategy and your readiness to migrate to Windows 10. The assessment provides you with details of how your Windows 10 devices can access vital business applications.

### Overview

The Application Assessment Service analyses your applications to determine their readiness for Windows 10. As a result of the assessment you will understand the options available for delivering your applications to your Windows 10 devices.

### Application Delivery Approach

This service is part of a best-practice approach developed by **eacs** to ensure the success of Desktop and Application delivery projects. These services take you through progressive steps designed to provide you with an accurate view of your user-base and current computing environment and help you determine the most suitable desktop and application delivery model for your users. The approach recommends conducting these essential information gathering exercises prior to any major investment in a new strategy.

### Methodology

In delivering this service, an **eacs** Consultant will use an Application Assessment tool to analyse your applications and determine compatibility for Windows 10. This data helps you plan for your migration to Windows 10 devices.

### Analysis

Using the application analysis tools, **eacs** provides simple reports that indicate the readiness of your applications for Windows 10, Windows Server, 64-bit, App-V, Remote Desktop Services, XenApp, XenDesktop and a whole range of other options.

# ONE TEAM MAKING IT WORK

## Management Report

The findings of all the assessments are consolidated into a *Management Report* which contains high level design and sizing recommendations for a centralised delivery solution that will satisfy the true needs of your organisation. The report is presented back to you to ensure all aspects of the report are fully understood.

## Remediation

Multiple options for application remediation are provided and indicated through a traffic light report:

- Green (easy)
- Amber (moderate)
- Red (difficult)

Product Name	Manufacturer	Version	4-bit Manager	Virtualisation Manager	Quality Manager	Desktop Compatibility Manager	Server Compatibility Manager

## Application Assessment Service

Desktops do not offer much to users without applications. Most organisations have a number of key applications that must be readily available to users from a variety of devices and locations. Therefore migrating these applications forms a critical part of any desktop transformation project.

Additionally, it's important to ensure your applications are compatible with the new model. Application testing and remediation through internal projects can be time consuming and costly.

**eacs is the expert in the delivery of IT services to the mid market. It is an award winning and trusted provider of IT solutions and managed services to a wide range of UK organisations of all sizes. Founded in 1994, eacs supplies practical, innovative and cost-effective IT products, solutions and services to businesses. Solutions include infrastructure, end user computing and systems management.
