

Future Proofing and Improving Resilience

Overview

eacs has supported an established product and design consultancy for a number of years and were recently asked to assist them with ensuring their IT infrastructure would support the future growth and expansion of the business.

Background

As a business the Clients' current IT infrastructure was designed and implemented a number of years ago and was in need of a review. The company had outgrown the current systems and were wanting to refresh their infrastructure to keep in line with the requirements of the business and its employees. More recently the Client had seen an increase in demand for an efficient remote working solution which would allow users to access applications and files from any remote location with an internet connection.

Key Factors

During initial planning it was clear that there were a number of key factors which needed to be taken into account during the design phase:

- Remote access.
- Future proofing the solution for additional growth.
- Maintaining the security and integrity of the client's data and systems by removing the reliance of insecure services.
- Improving system resilience by removing the reliance on the current on-premise server.

Outcome

Working with the client's team, **eacs** designed, implemented and migrated the clients email services to Office 365. The final solution provided advanced email security as well as spam detection to end users. In addition, **eacs** migrated all file storage to Office 365 thereby removing the reliance on local servers and insecure services, therefore improving their security posture, resilience and their ability to operate in the event of an incident.

Benefits

As a result of the successful implementation the client enjoyed the following additional benefits:

- Increased uptime
- Reduced costs
- Improvement of Business Continuity
- A bespoke solution that was tailored to the client specific requirements
- Technical support

To understand more about how **eacs** can help you realise the benefits of Office 365, why not speak to one of our specialists by emailing information@eacs.com or contact us on **0800 8047 256**, and we will call you back.
