

## Securing Microsoft Teams

Cyber Security

### CYBER SECURITY

PREDICT. PREVENT. DETECT. RESPOND

**eacs** security services can help keep your organisation safe. We provide solutions that ensure you are protected against the ever changing threat landscape and follows the proven industry model of **Predict, Prevent, Detect and Respond**.

#### 1 PREDICT

Using our Penetration Testing and Vulnerability Assessments, we can discover and highlight vulnerabilities before they are exploited

#### 2 PREVENT

From Anti-Ransomware protection to Authentication services, **eacs** can help to mitigate against weaknesses in your organisation, giving you peace of mind

#### 3 DETECT

**eacs's** Threat Detect service provides a 24/7, 365 days a year incident response team to identify threats and notify the appropriate contacts

#### 4 RESPOND

Our respond services can recover your data and systems quickly and provide preventative action to reduce the risk of an attack happening again

For more information about the security services **eacs** provides, visit [www.eacs.com/services/cyber-security/](http://www.eacs.com/services/cyber-security/) or call 0800 8047 256

Security of data is now the most important consideration for any organisation.

Our Cyber & Security practice provides advice and services that ensure you are protected against the ever-changing threat landscape, helping you to predict, prevent, detect and respond to malicious attacks.

### Business Value

As more organisations are adopting Microsoft Teams for their messaging and collaboration needs, the security and safety of your implementation and data is becoming increasingly important. Although the data stored in Microsoft Teams is encrypted at rest and in transit, the sheer flexibility of the platform can still bring risk to your organisation. By using the full Security and Compliance capabilities of the Microsoft 365 suite, you can minimise the risk of data loss, and protect the valuable information that you rely on to do business.

### Overview

The data in Microsoft Teams is stored in a number of locations, increasing the importance for a carefully planned implementation. The majority of Microsoft Teams data is stored in SharePoint, Exchange and OneNote, with Stream and OneDrive as potential locations for recordings and synchronised files. This could potentially require a large number of tools and complex configuration to secure.

Fortunately, Microsoft already provide a large suite of tools to help you protect your valuable company data, including how and where it is accessed.

Using our expertise in Microsoft 365, **eacs** will begin by optimising your Microsoft Teams configuration, with a view to providing the highest level of control to your administrators. Careful consideration will be given to user permissions and roles and the management of your Teams.

### Overview

- Regain control of your Microsoft Teams environment
- Review of user permissions and roles
- Protect data using Microsoft 365 Security and Compliance

# // ONE TEAM MAKING IT WORK

In order to protect the content generated and stored in Microsoft Teams, and restrict unsafe access and downloads, it is necessary to utilise the Security and Compliance features that are part of Microsoft 365. eacs will assist you in the journey to configure each of the following features:

- Data Loss Prevention
- Multifactor Authentication
- Conditional Access
- Azure Information Protection

## Additional Services

eacs has a range of solutions and services that follow the proven industry model of Predict, Prevent, Detect and Respond. Discover vulnerabilities in your systems and remediate them, before they are exploited by someone else (predict). Significantly reduce the risk of damage from cyber-attacks (prevent). Monitor applications, systems, and networks for intrusions and suspicious behaviour (detect). Recover systems and data; perform forensic analysis and bounce back stronger (respond).

In addition to IT security solutions and services, eacs can help your organisation to attain and maintain Cyber Essentials, ISO27001 and GDPR compliance.

## Summary

The eacs Securing Microsoft Teams engagement will result in a controlled, secure platform that your business can rely on for messaging and collaboration, both internally and with trusted external contacts.

*“eacs is the expert in the delivery of IT services to the mid-market. It is an award winning and trusted provider of IT solutions and managed services to a wide range of UK organisations of all sizes. Founded in 1994, eacs supplies practical, innovative and cost-effective IT products, solutions and services to businesses.”*
