MAKING IT WORK

Power Platform Training Workshops

Workshop 1: Where to Start?

If you're just starting out with the Power Platform, this is a great opportunity to get an understanding of what you and your organisations can achieve.

One of our skilled consultants will discuss the different tools available within the Power Platform and how they work together to provide a flexible and efficient solution. There will be an opportunity in this workshop to demonstrate the art-of-the-possible and have a relaxed discussion around the challenges that you face and how the Power Platform can solve them.

Workshop 2: What Next?

If you already know what the Power Platform is but you aren't sure how to plan for and implement some of the great ideas you have, this workshop will give you a clear understanding of what next steps are best for you.

Together we can explore the solutions you want to implement and find the best approach to do so. Whether we're on hand to provide technical guidance whilst you build you own solution, or we're teaching your team some key Power Platform skills with one of our pre-made apps, eacs can help provide the right level of support that fits your requirements.

Workshop 3: How to do More?

If you already have the skills in house to build apps and automations but you aren't sure how to strategically plan, test and implement some of your larger projects, this workshop will enable one of our consultants to review your plans, and help ensure your implementation follows best practice guidelines, and is structured for line-of-business use.

We can provide support throughout your project, or simply deliver training to give you some fresh ideas as to how your larger projects can be built effectively.
